PS229

4-Channel Secondary Monitoring IC

General Description

PS229 is specially designed for switching power supply system. Four important functions of PS229 are the followings: over-voltage protection, over-current protection, under-voltage protection and power good signal generating.

OVP/UVP (Over-Voltage/Under-Voltage Protection) monitors 3.3V, 5V and dual 12V to protect our power supply and PC, FPO/ goes to high when one of these supply voltages exceeds their normal operation voltage range.

OCP (Over Current Protection) monitors IS33, IS5, IS12 input current sense. An adjustable over-current condition composed of Iref and “protection current range resistor” helps users design OCP easily.

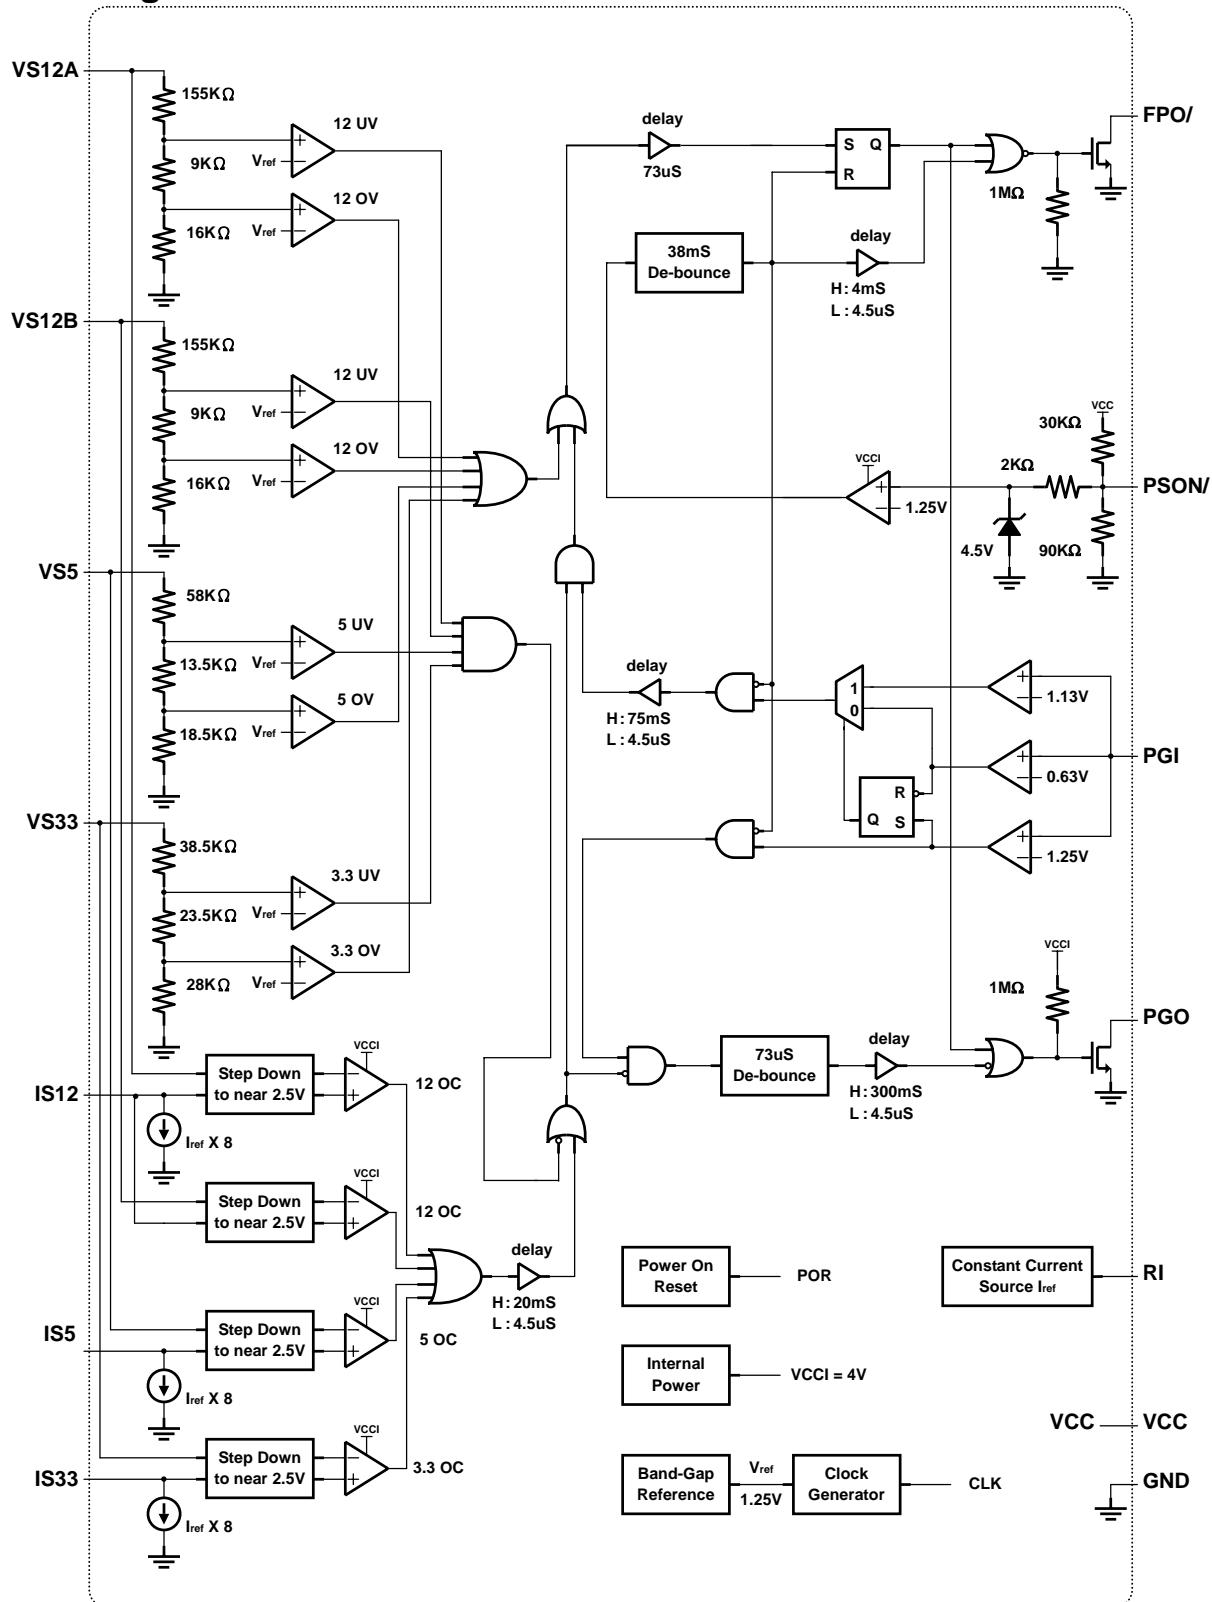

Power good signal generating notifies personal computer when power supply is ready or power supply is going to shutdown, therefore it can provide a reliable power supply environment.

Features

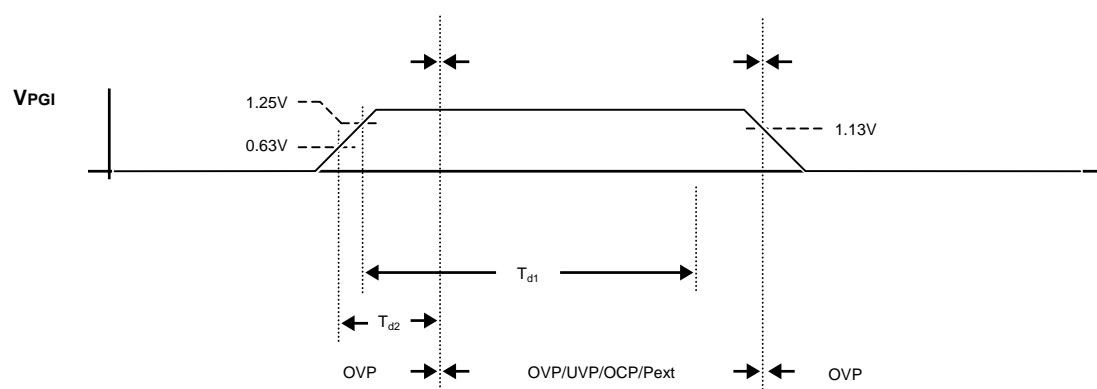

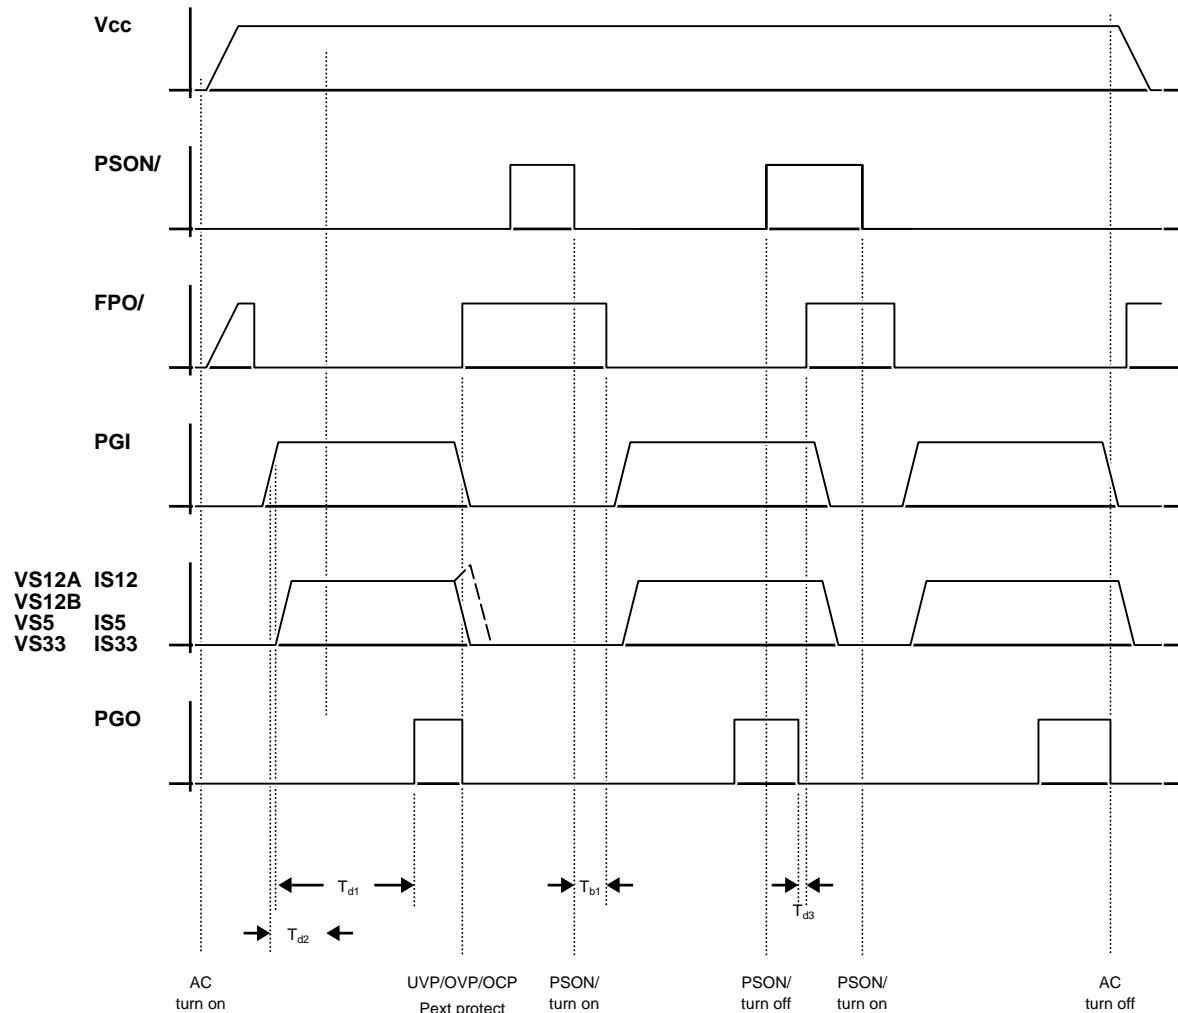

- Over/Under-voltage protection and lock out
- Over-current protection and lock out
- Fault protection output with open drain output stage

- Built-in 300mS power good delay
- AC on 75ms delay for UV/OC protection
- 38mS PSON/ control de-bounce
- Wide power supply range (3.8V~16V)
- Special care for AC power off

Application

Typical 4 rails SPS

Notes:

1. Zener diode or resistor or both of them can be used in component X.
2. The bypass capacitor C_{BY} suggests to be $0.1\mu F \sim 10\mu F$ and layout nearby pin VCC.
3. The recommend sense values of $R_{S12(1)}$, $R_{S12(2)}$, R_{S5} and R_{S33} are $\geq 0.002\Omega$.
4. Over-Current Protection design example:

$$(1) I_{ref} = 20\mu A, R_I = \frac{V_{RI}}{I_{RI}} = \frac{1.25}{20\mu} = 62.5K(\Omega)$$

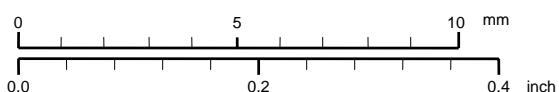

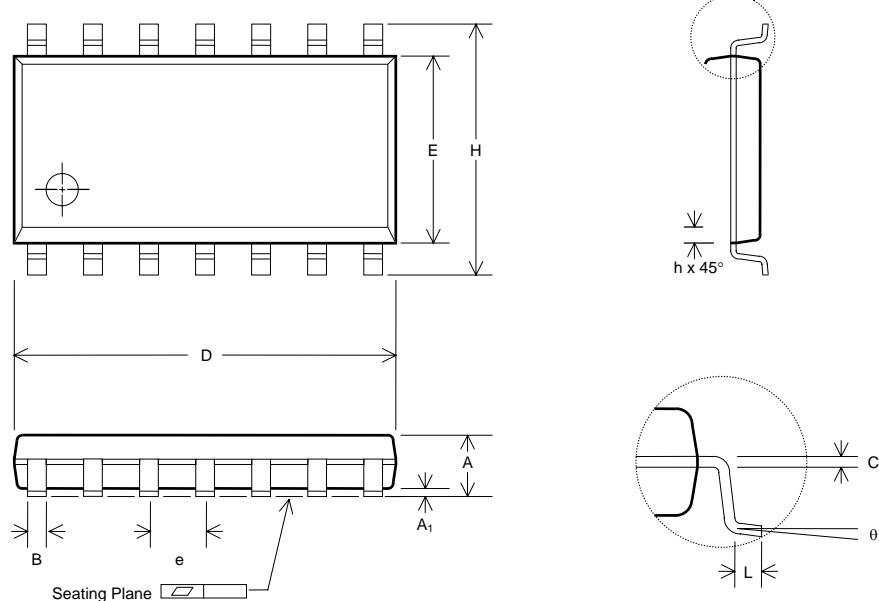

$$(2) R_{S5} = 0.002\Omega, \Delta V_{5V} = 0.002 \times I_{+5V} = R_{OC5} \times 8 \times I_{ref}$$

$$(3) \text{ If } +5V \text{ OCP trip point is } 20A, R_{OC5} = \frac{0.002 \times 20}{8 \times 20\mu} = 250(\Omega)$$
